

Shipping Precaution

For regulatory compliance samples that require cooling
must be preserved at $4 \pm 2^{\circ}\text{C}$.

Laboratories are required to reject or flag samples
that are not preserved properly.

Blue Ice will not reliably maintain the low temperature required.

We recommend that samples be shipped using double bagged ice.

The double bagging is necessary to prevent leakage during shipment.

If you have any questions regarding shipping requirements, or any other concerns,
please call **(503) 254-1794**.
